

Performance evaluation of parallel sorting algorithms on large data sets

Nicola Desogus, Paolo Giangrandi, Fabio Luporini

November 22, 2010

Contents

1	State of the art	2
2	Parallel sorting algorithms	2
3	Structuring the framework	2
3.1	Design choices	2
3.2	Data generation	2
3.3	Performance evaluation	2
3.4	API	2
4	Test environment	2
4.1	MPI cost model	2
5	Description and performance evaluation of the algorithms	2
5.1	Mergesort	2
5.2	Quicksort	2
5.3	Bucketsort	2
5.4	Samplesort	2
5.5	Bitonicsort	2
5.6	Load-Balanced Mergesort	2
5.7	K-Way Mergesort	2
6	Comparing the algorithms: analysis of the results	2
7	Conclusions and future works	2

- 1 State of the art
- 2 Parallel sorting algorithms
- 3 Structuring the framework
 - 3.1 Design choices
 - 3.2 Data generation
 - 3.3 Performance evaluation
 - 3.4 API
- 4 Test environment
 - 4.1 MPI cost model
- 5 Description and performance evaluation of the algorithms
 - 5.1 Mergesort
 - 5.2 Quicksort
 - 5.3 Bucketsort
 - 5.4 Samplesort
 - 5.5 Bitonicsort
 - 5.6 Load-Balanced Mergesort
 - 5.7 K-Way Mergesort
- 6 Comparing the algorithms: analysis of the results
- 7 Conclusions and future works
